# Open Source

# ProActive: Open Source

- **Open to**  
⇒ **Industry Standards**

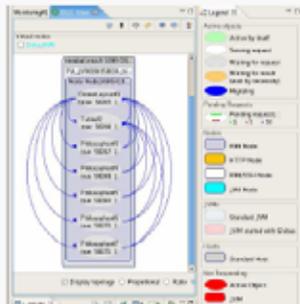

- **Effective:**  
⇒ **Used for The Grid Plugtests**  
⇒ **Over 2000 CPU across the world at once**

# ProActive GUIs

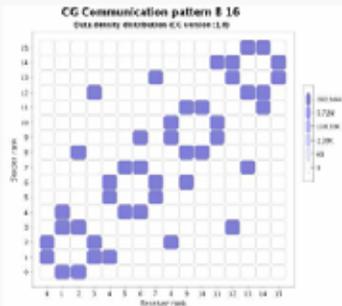

## Graph of Distributed References

Display the references between active objects; in short it can easily spot cyclic dependencies.

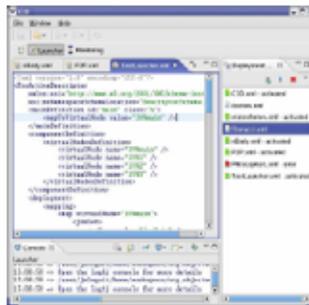

## TimIT Pattern

Visualize both number and size of communications between distributed entities.

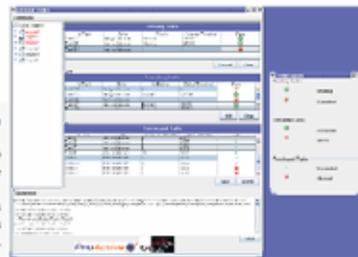

## Launcher and Scheduler

Launching applications directly from the GUI.

Allow seamless deployment on local machines (ssh, sth...), as well as on third-party schedulers (such as Platform™ LSF, P85, Globus, Sun GE, glide, Unicore...). The toolbox also provides a simple generic scheduler interface that lets you deploy your own scheduler, or integrate directly within your application.

## GRID Scilab

ProActive Interfaces with the Scilab Scientific Free Software Package

It allows the deployment of Scilab instances on distributed nodes, and manages scripts to be executed in parallel.

# GRID IDE: Integrated Development Environment

**IC2D: View, Manage, Control Distribution and Parallelism**

## Grid IDE Overview

ProActive features an **integrated full-fledged Grid IDE** (Integrated Development Environment) named **IC2D**. It features graphical monitoring and control, programming wizards, debugging and optimizing tools which all contribute to **high-productivity grid development**. Moreover, enterprise developers can work in a familiar setting within **Eclipse plugins**; increasing both productivity and reducing the need for new training.

## IDE HIGHLIGHTS

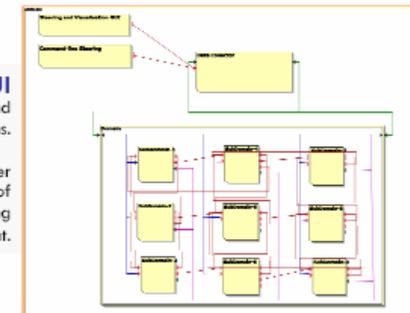

**Health of your applications including Graphical Monitoring and Control, Programming Wizards, Debugging and Optimizing Tools**

## Graphical Monitoring View

A graphical environment for remote monitoring and steering of distributed and grid applications.

It provides a graphical visualisation for hosts, Java Virtual Machines, and active objects, including the topology and the volume of communications.

Job monitoring (right side) provides a tree representation of all these entities.

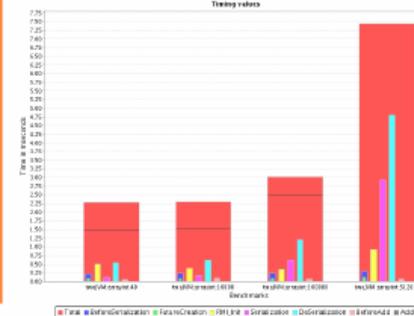

## Fractal GUI

A graphical tool to edit Fractal and Grid Component configurations.

The GUI allows for Client/Server interface connections, and renaming of Virtual Nodes for controlling mapping and co-allocation at deployment.

Remote Call - array[int] Size (500 iterations, warmup =500)

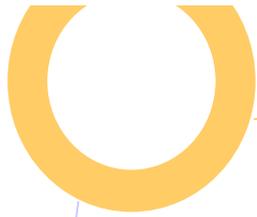

## TimIT Bench

A complete solution to benchmark and optimize applications' performance.

TimIT is able to produce a large variety of statistics, advanced timers with hierarchical capabilities.

TimIT automatically generates statistical charts.

**GridCOMP**  
Effective Components for the Grids

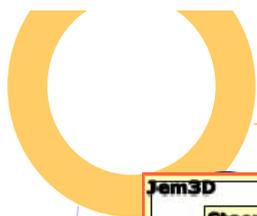

- **GCM: Grid Component Model**
  - ⇒ **GCM** Being defined in the NoE CoreGRID (42 institutions)
  - ⇒ Open Source **ObjectWeb ProActive** implements a preliminary version of GCM
  - ⇒ Autonomic Features
  - ⇒ Service Oriented: **NESSI** relation exp. (Services come to life from Cp)

- **GridCOMP takes:**

- ⇒ **GCM** as a first specification,
- ⇒ **ProActive** as a starting point, and Open Source reference implementation.

MELBOURNE

# GCM for Code Coupling : Vibro Acoustic (courtesy of EADS)

# GCM for Electromagnetism: Jem3D

The screenshot displays the Jem3D Desktop application interface. The main window is titled "Jem3D Desktop" and contains several panels:

- Preferences:** A panel on the left with tabs for "Statistics" and "Display". Under "Display", "Active scalars" is set to "Ez" and "Representation" is set to "Points". There are checkboxes for "Geometry", "Outlines", "Isosurfaces" (checked), and "Scalar bar".
- Jem3D launcher:** A panel below preferences with tabs for "XML descriptor", "Partitioning", and "Computation". It includes an "XML descriptor Chooser" with "new", "open", and "Apply" buttons. It shows "Nodes: 2 nodes" and an "XML descriptor preview" with XML code:

```
<?xml version="1.0" encoding="UTF-8"?>
<ProActiveDescriptor xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://www.w3.org/2001/XMLSchema-instance http://www.w3.org/2001/XMLSchema-instance">
  <componentDefinition >
    <virtualNodesDefinition >
      <virtualNode name="Jem3DNode" property="mult">
    </virtualNode>
    </virtualNodesDefinition>
  </componentDefinition>
</ProActiveDescriptor>
```
- 3D View (top):** A 3D visualization of a rectangular domain with a color-coded scalar field. A vertical color bar on the left indicates values from 0.00 (red) to 1.00 (blue), with intermediate markers at 0.250, 0.500, and 0.750. A small icon of a vector field is visible in the top left of the view.
- Jem3D Console (top right):** A console window showing the output: ">> Ready." and ">> Data collector agent loaded."
- 3D View (bottom right):** A 3D visualization of the same domain, but with a wireframe grid overlaid on the surface, showing the underlying mesh structure.
- Jem3D Console (bottom right):** A second console window, identical to the one above, showing the same output.

# Jem3D

The screenshot displays the Jem3D software interface. On the left, there are two panels: "Display Preferences" and "Customize scalar bar".

**Display Preferences:**

- Color by: scalars
- Select actor: Geometry
- Representation: Surface
- Point size: 1.0
- Line width: 1.0
- Decimate factor: ON
- Visibility:
- Anti Aliasing:
- Outline when moving:
- Show tips:

**Customize scalar bar:**

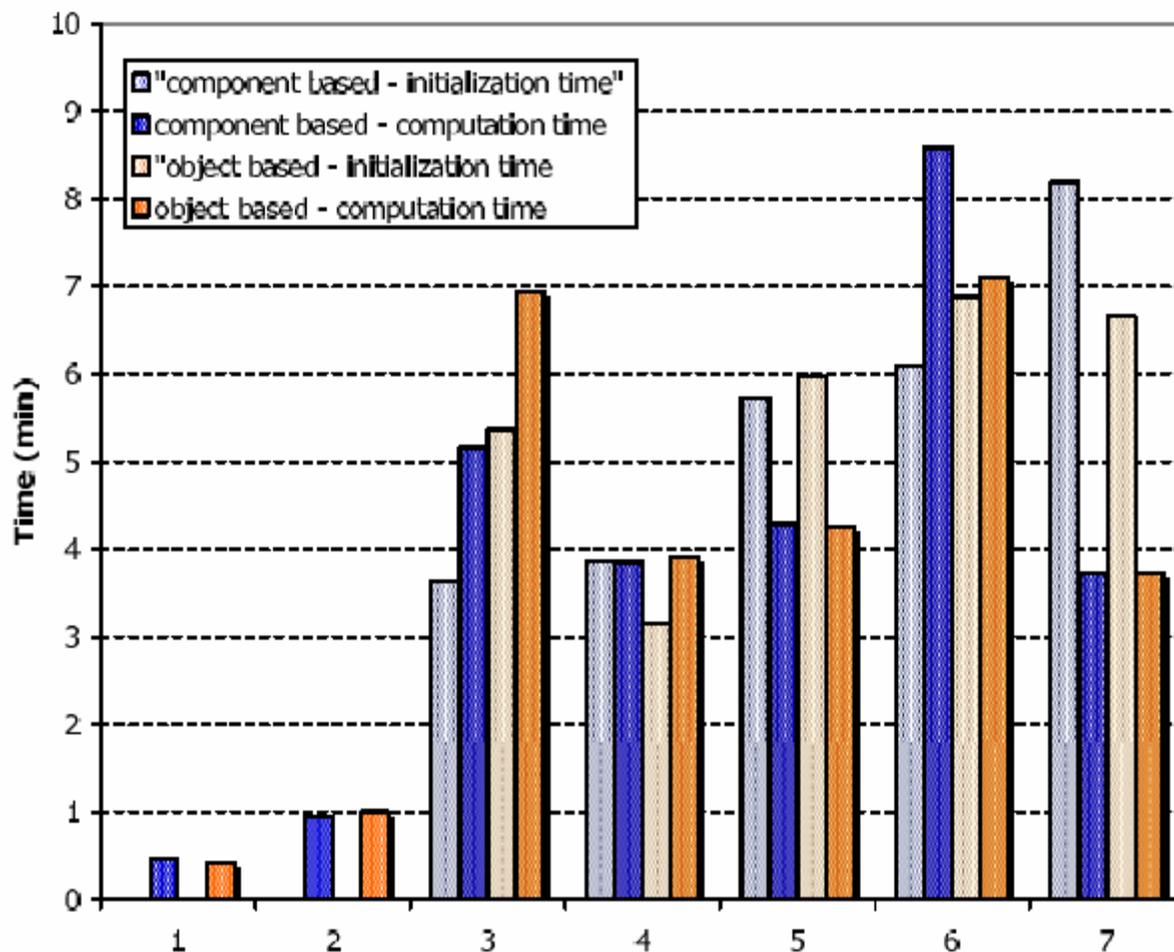

- Title: H
- Number of labels: 15
- Visible:  Times
- Height: [Slider]
- Width: [Slider]
- X position: [Slider]
- Y position: [Slider]
- Vertical:  Horizontal:

The main window shows a 3D model of an aircraft with a color gradient. To the right of the model is a vertical scalar bar labeled "H" with values ranging from 0.326 (red) to 1.44 (blue). The values are: 0.326, 0.406, 0.486, 0.565, 0.645, 0.725, 0.805, 0.885, 0.965, 1.04, 1.12, 1.20, 1.28, 1.36, 1.44.

Other windows include "J ECS Tutorial" with installation instructions and "Java Environment for Computational Steering" with a menu bar (File, Visualize, Edit, Deployment, Steering, Collaboration, Look & Feel, Help) and a toolbar.

Experiment	Mesh size	Number of Processors
1	$41 \times 41 \times 41$	20
2	$81 \times 81 \times 81$	70
3	$201 \times 201 \times 201$	130
4		138
5		258
6		258
7		308

**Component based vs Object based**

**Executed on  
Grid5000**

**Several  
Clusters**

Information Society

Over 4 000 machines all over the world

- Organized together with:

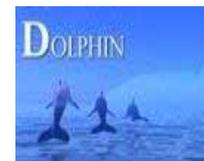

- Using for interoperability:

# GRID Plugtests -- 2006 FlowShop contest

- **Goal of the FlowShop contest**
  - ⇒ Solve the 10 Taillard instances with 20 jobs and 20 machines
- **2005 FlowShop contest**
  - ⇒ The winner was POZNAN PUTat3AM - POLAND (**4 581s**)
- **2006 FlowShop contest (4 teams)**
  - ⇒ BUPT – Beijing University - China
  - ⇒ Kanban System - University of Tokyo - Japan
- **The winner is Kanban System: 553 s, 207 workers**
  - ⇒ *Beating 2005 FlowShop contest record*
  - ⇒ BUPT: 13 760 s, 86 workers

# GRID Plugtests – 2006 NQueens contest

- Goal of the N-Queens contest
  - ⇒ Solve the maximum number of N-Queens solutions in 1 hour
  - ⇒ On a maximum number of machines
  - ⇒ With the most efficient algorithm
- 2006 N-Queens contest (10 teams)
  - ⇒ Eight Samurai - University of Tokyo – JAPAN
  - ⇒ FIT – Tsinghua University - CHINA
  - ⇒ BUPT – Beijing University - CHINA
  - ⇒ VU – Vrije University - NETHERLANDS
  - ⇒ ChinaGrid – CHINA
  - ⇒ MOAIS/Kaapi – FRANCE using direct login
  - ⇒ UDP - Diego Portales University - CHILE
  - ⇒ LSC/UFMSM – BRAZIL
  - ⇒ POZNAN PUT@3AM - POLAND
  - ⇒ POZNAN OUTPUT - POLAND

# 2006 N-Queens contest

- The 3rd ProActive Prize winner is VU – Vrije University
  - ⇒ Calculated N=22 Queens in 27mn
- The 2nd ProActive Prize winner is ex-aequo BUPT and FIT with ~5 000 Billions solutions found on ~680 workers
- The 1st ProActive Prize winner is Eight Samurai with ~6 467 Billions solutions found deployed on 2193 workers
- The « Prix special du Jury » is MOAIS/Kaapi
  - ⇒ Calculated 8 times N=22 Queens ~21 528 Billions solutions in 4600s (1h16mn) on 1348 Workers
  - ⇒ Computed N=22 Queens in 488s (8mn8s)
  - ⇒ And N=23 Queens ~24 233 Billions solutions in 4 415s (1h13mn)

# Conclusion

**Compete Next Year for the 2007 Grid Plugtest !**
